

CSE110A W26: Extra Credit Ideas

CSE110A: Introduction to Compiler Design

Extra Credit 1 (highest value): Doing HWK5A, POSSIBLY HWK5B as well. If we hand out a HWK5B you can do either or both. More details coming. - these can be done in addition to the other extra credits below.

Additional Extra Credit: Do a minimum of 3 pages summary about any of the videos or topic write-ups below. You can use ChatGPT, but you need to include the questions and answer, and at least one paragraph of how you used it and why.

Additional Extra Credit: Giving a 5 minute talk (plus) on the last day of class on a topic you choose.

The grading details of the extra credit, are still being worked out. At present think of this as additional learning experience.

The topics below are suggestions: A good source of interesting topics about compilers is the LLVM Channel in YouTube. In a way the farther back you go, the less esoteric the topics are. LLVM IR, MLIR, and tool chain related to LLVM are all great topics. Topics related to Flex, Lex, Yacc, Bison, etc.

You can also do something interesting in the LLVM pipeline. e.g. something cutting edge provocative that could stimulate future work for yourself and others. e.g. suggest a novel idea. You can do this yourself and/or collaborate with a 2nd person.

Possible things to cover:

- Make a critique of the video, from a learning perspective
- Interesting aspects of what you saw.
- Mini-tutorial of what you learned.
- Review of novelty of ideas you saw.
- Potential for future research.
- Recommendations.
- Make it interesting to yourself and others.
